

DULUX TRADE DIAMOND PRODUCTS CLEANING RECOMMENDATIONS

DURABLE PRODUCTS & EFFECTIVE CLEANING HELP SURFACES LOOK GOOD FOR LONGER

Where surfaces are exposed to high levels of wear and tear, durable or high performance coatings are recommended. Paint surfaces could of course still become dirty due to the nature of the environment but a good cleaning regime will ensure surfaces look better for longer.

With the right paint, colour and cleaning regime your environment remains pleasing and inspirational, enables your customers to manage costs, and redecoration cycles are extended.

MAINTENANCE

There are two cleaning regimes that can be adopted, general cleaning and heavy duty cleaning. These could be implemented either on a quarterly, half yearly, yearly or on a 'as necessary' basis depending upon the environment. Frequency of the regime would be dependent on the areas exposure to wear and tear, colour, finish and budget.

Vigorous scrubbing and the use of abrasive cleaners or scourers may impair the finish and is **not recommended**. Only apply enough pressure to remove marks. Full durability develops seven days after initial application.

CLEANING REGIMES

For general cleaning

- Dilute in a bucket 1 part Sprint cleaner (or similar mild detergent) and 50 parts warm water.
- Use a clean Decorator Sponge to wipe the walls.
- Allow to dry.

If this is not working then move to the heavy duty cleaning regime.

For heavy duty cleaning

- Dilute in a bucket 1 part Sprint cleaner (or similar mild detergent) to 20 parts warm water.
- Use a clean Decorator Sponge to wipe the walls.
- Allow to dry.

CLEANING REGIMES FOR DIAMOND HIGH PERFORMANCE EGGSHELL

When Dulux Trade Diamond High Performance Eggshell has been used, and when the general and heavy duty cleaning regimes have already been attempted, any remaining marks not removed by the sponge, can be cleaned with a Doktor Power Magic Eraser and clean warm water.

PRO TIP - With all cleaning regimes it is recommended to test a small hidden area first before widespread use.

The Doktor Power Magic Eraser is **not recommended** for use when cleaning deep colours. Instead the general and heavy duty cleaning regimes using Sprint cleaner are recommended.
