sand

Pack size

1KG

Application Method

Remove inner Part B from the main Part A container. Mix equal amounts of Parts A and B on a flat surface into a smooth even coloured paste. Do not prepare more than can be applied in 5-10 minutes, as this is the working life of the product. Press the filler into the repair with a filling knife and finish off by smoothing with a wet knife and leave to set. Sand down when fully dry and overpaint when used outside.
